PROJECT PHOTOS

Commissioning & Re-Commissioning

Comprehensive verification of system performance for new builds and retrofits.

info@Alharbitechs.com

Temperature and humidity testing

To ensure occupant comfort and health, protect building materials and contents from moisture damage, verify proper HVAC system operation, and comply with building codes and standards.

PROJECT PHOTOS

Duct Leakage & Pressure Testing

Duct leakage and pressure testing ensure ductwork integrity and energy efficiency by sealing off vents, pressurizing the system with a fan, and measuring the airflow needed to maintain a specific pressure to identify and quantify leaks. This helps to reduce energy waste, improve indoor air quality, and ensure HVAC systems deliver conditioned air efficiently.

Commissioning Management

Commissioning Management adopts a structured, systematic, and auditable approach to planning, executing, and verifying the commissioning process. This methodology ensures that building systems are delivered fully operational, functional, and in full compliance with the design intent, specifications, and project requirements.

We offer comprehensive Commissioning Management services (**CxM/CxA**), covering all project stages from design through construction, handover, and post-completion. Our services ensure that commissioning activities are effectively planned, coordinated, executed, and fully documented.

Our flexible commissioning framework allows for customization at every stage of the process, enabling the development of a tailored commissioning strategy that aligns precisely with your facility's operational needs while complying with applicable codes, standards, and industry best practices.
